The Honorable Joy A. San Buenaventura
Chair, Committee on Health and Human Services
415 South Beretania Street
Honolulu, HI 96813

Dear Chair San Buenaventura, Vice Chair Aquino, and members of the Committee on Health and Human Services:

The American Pharmacists Association (APhA) appreciates the opportunity to submit proponent testimony on [Senate Bill \(SB\) 1245](#) (Chair Buenaventura). SB 1245 will allow for the reimbursement of services provided by participating registered pharmacists practicing within their scope of practice by private and public health plans in the State beginning January 1, 2026. Realigning financial incentives in our healthcare system to allow for health plan reimbursement under the medical benefit of services provided by pharmacists ensures patients have more time with their most accessible healthcare professional, their pharmacist. It also correctly aligns the current role of the pharmacist with their extensive education and training to practice at the top of their license.

We also support the submitted testimony from the Hawai'i Pharmacists Association.

Substantial published literature documents the proven and significant improvement in patient outcomes¹ and reduction in healthcare expenditures² when pharmacists are optimally leveraged as the medication experts on patient-care teams. The expansion of programs that increase patient access to health care services provided by their pharmacist in Hawai'i is aligned with the growing trend of similar programs in other states, such as California, Colorado, Idaho, Kentucky, Minnesota, Missouri, Nevada, New Mexico, North Carolina, Ohio, Oklahoma, Oregon, Tennessee, Texas, Virginia, Washington, West Virginia, Wisconsin, and others. In states where such programs have already been implemented, health plans recognize the value of the pharmacist and invest in the services they provide to capitalize on the positive therapeutic and economic outcomes associated with pharmacist-provided care.³

Given the unique patient population and barriers to care due to the primary healthcare worker shortage⁴ in Hawai'i, APhA firmly believes that considering a payment model that includes reimbursement for pharmacists' services is the missing piece to allow other professionals to utilize pharmacists under their training as the medication experts on patient care teams. As the most accessible healthcare professionals with nearly 90% of the U.S. population living within five miles of a community pharmacy,⁵ pharmacists are vital care providers, especially for those living in underserved and remote communities. Patient access to pharmacist-provided care can address health inequities while reducing hospital admissions, increasing medication adherence, and decreasing overall healthcare expenditures by recognizing and covering the valuable healthcare services pharmacists provide, similar to Hawai'i's recognition of many other healthcare providers.

As you may be aware, many of Hawai'i's neighborhood pharmacies,^{6,7} especially those in rural communities⁸, are closing because the unsustainable reimbursement model in the drug supply chain is enhancing healthcare disparities. Without immediate changes, the current payment model is putting many independent pharmacies out of business and creating "pharmacy deserts" in minority and underserved communities, where the neighborhood pharmacy may be the only healthcare provider for miles.⁹

Creating programs that allow for the direct reimbursement of services provided by pharmacists through Med-Quest, Medicaid Managed Care Organizations, and private health plans opens additional revenue opportunities for these pharmacists to maintain their practice and provide valuable health care services necessary for many Hawai'i communities. It is also important to note that these programs are not expected to raise costs for health plans, as published literature has shown that pharmacist-provided care results in cost savings and healthier patients.^{10,11} This strong return on investment supports why many other states have established comparable programs. For example, Oregon identified in its fiscal legislative analysis that the creation of a similar program that would permit pharmacists to engage in clinical pharmacy practice and provide patient care services to patients would have "minimal expenditure impact on state or local government."¹²
